This is a performance test for 3 way fridges

		7AM		9AM		12 NOON		3PM		6PM	
		Fridge Temp	Ambient Temp	Fridge Temp	Ambient Temp	Fridge Temp	Ambient Temp	Fridge Temp	Ambient Temp	Fridge Temp	Ambient Temp
240 v with vents on	Day 1										
	Day 2										
240 v with vents off	Day 1										
	Day 2										
Gas with vents on	Day 1										
	Day 2										
Gas with vents off	Day 1										
	Day 2										

Make sure to:

- Use a remote probe digital thermometer - preferably with inside/outside readings (make sure to write the exact temperature ie. 4.987).
- Place probe on bottom shelf towards the rear.
- Make sure the caravan/motorhome/camper is perfectly level with a spirit level.
- Run fridge on maximum thermostat setting on 240v first. After 2 days if possible, remove upper and lower vents and record the difference. If possible repeat the test on gas.
